abderrahimjami

1 month / 4 weeks

Education

Abertay University, *Computer Games Applications Development*
09/2017 – 07/2021 | Dundee

Skills

- C++
- C#
- Unreal Engine
- Software Architecture
- Debugging
- Rider IDE

Languages

English — Fluent

Italian — Native/Bilingual

Hobbies

- Videogames
- Guitar/Piano
- Movies
- Game Jams
- Table Tennis

Profile

Edinburgh-based UE5 C++ developer at Leonardo UK. Abertay University graduate (2021) with professional experience building 3D simulations and past academic background in Unity and C#.

Employment History

Lead Gameplay Programmer (Part-Time), *Future Realm Games*
09/2026 – Present | Remote

- Leading a team of 4 programmers
- Contributing to the codebase and implementing gameplay features using GAS, StateTrees, AI Perception and Gameplay Camera
- Liaising with other art/design and narrative department leads
- Steering technology adoption and performing code reviews

Unreal Engine Developer, *Leonardo UK*
09/2024 – Present | Edinburgh

- Led Unreal Engine C++/Blueprint development for 6-person Synthetics team from its formation, establishing UE5 as the platform's simulation engine.
- Built middleware integration connecting UE5 to proprietary software for synthetic data generation, including a WebSocket-based FastAPI backend and ONNX/NNE-driven object detection pipelines for Reinforcement Learning tasks.
- Acted as the team's sole Unreal Engine subject matter expert, onboarding 4 engineers, running knowledge-share sessions on UE5 workflows, and responsible for company Unreal Engine documentation.
- Delivered 3 interactive demonstrations for internal stakeholders, showcased at trade shows.
- Collaborated with in cross-functional teams to integrate proprietary software components with Unreal Engine 5.
- Supported internal stakeholder group through interactive Unreal Engine demonstrations and technical presentations.

Gameplay programmer, *By The Fire Studio*
12/2022 – 09/2023 | Dundee

Designed, implemented, and documented 8 gameplay systems for an indie game project using Unity and C#, including quest systems, weapon mechanics, enemy AI, and player interaction and movement.

Projects

LimitBreak Horror Demo, *Current Project*
04/2024 – Present

- Developing an Unreal Engine 5 horror prototype inspired by Resident Evil 7, originally started during the 2024 Limit Break mentorship programme with guidance from Creative Assembly's Dmitry Galenko.
- Building core gameplay systems including GAS integration, first-person camera mechanics, inventory logic, and a contextual interaction system.

Action Time Battle System
07/2025 – 11/2026

- Designed and developed a standalone action time battle system in Unreal Engine using Blueprints.
- Implemented State Tree-driven combat flow, active time gauge turn queuing, and component-based combatants.
- Built extendable AI logic, data-driven abilities and ability sets, and a dynamic UMG interface responsive to gameplay triggers.
- Solved Blueprint-only workflow constraints by implementing custom queue management and keeping UI state synchronised with combat flow.
